CAREER OBJECTIVE

B.Tech graduate in Computer Science (AI & ML) seeking an entry-level Java Full Stack Developer role. Strong foundation in Java, OOP, relational databases (JDBC), and the software development lifecycle, with hands-on project and internship experience building and deploying end-to-end applications.

TECHNICAL SKILLS

- Programming Languages: Java
- Web Technologies: HTML, CSS, JavaScript, ReactJS
- Databases: MySQL, Oracle SQL
- Core Concepts: Object-Oriented Programming (OOP), DBMS, Software Development Life Cycle (SDLC), Data Structures
- Tools & Platforms: VS Code, Eclipse, Git, MS Excel, Power BI

EDUCATION

Godavari Institute of Engineering and Technology, Rajahmundry <i>B.Tech in Computer Science & Engineering (AI & ML) — 7.51 CGPA</i>	2021 – 2025
Sasi New Gen Junior College, Velivenu <i>Intermediate (MPC) — 95.9%</i>	2019 – 2021
St. Joseph's High School, Vellachintalagudem <i>SSC — 9.3 GPA</i>	2018 – 2019

INTERNSHIP EXPERIENCE

AIMERS, Vijayawada

Machine Learning Intern

- Developed real-time object detection models using the YOLO architecture, improving inference speed for live video streams.
- Engineered Telegram automation bots integrated with ChatGPT and Gemini APIs, enabling conversational task automation for end users.
- Researched AI-driven security measures and cyber-attack vectors to strengthen understanding of secure application design.

PROJECTS

Bank Management System Using JDBC [\[GitHub\]](#)

Individual Project — Java, JDBC, MySQL/Oracle SQL, OOP

- Built a console-based banking application in core Java implementing account creation, deposit, withdrawal, balance inquiry, and transaction handling.
- Used JDBC to connect the application layer to a relational database, applying CRUD operations and SQL queries for persistent, structured data storage.
- Applied object-oriented design (classes, encapsulation) to model bank accounts and transactions, structuring the codebase for maintainability.

NLP-Based Recognition of False Bulletin with Hybrid Machine Learning Methodologies [\[GitHub\]](#)

Team Project — Python, Flask, scikit-learn, XGBoost, NLTK, spaCy, BERT, MySQL

- Designed and implemented a full-stack web application (Flask UI + ML backend) that classifies news articles as real or fake in real time, taking a project from requirements through deployment.
- Built a hybrid classification pipeline combining Logistic Regression, Random Forest, XGBoost, and SVM with an ensemble (majority-voting) layer, achieving up to 94.2% classification accuracy

ACHIEVEMENTS

- Presented a paper at the IEEE 6th International Conference on Recent Advancement in Information Technology (RAIT) 2025, held at the Indian Institute of Technology Dhanbad, March 2025.
